- Status changed from New to Closed

- Resolution set to Wont fix

This setting is only used to generate URLs in email notifications (which can be sent by offline scripts).
Feeds URLs uses the Host header of your HTTP request.

Hi Jean-Philippe,

Ok so if Feeds URLS uses the host header of the HTTP request, it still a bug since i'm using Redmine througth a Reverse Proxy which Pass Request like that :

dev.mydomain.com:443 (External) => IIS Reverse Proxy with Rewrite Rules (8443) => localhost:8088 (Apache) => Mongrel (localhost:3001,3002)

I think it should be great to be able to specify Feeds URLs host names.

Thanks.

#3 - 2009-10-11 11:09 - Jean-Philippe Lang

Your reverse proxy should set the X-Forwarded-Host header. Rails will use it.
