

Redmine - Patch #39865

extend mysql8? test helper to handle complex version strings

Description			
In my MariaDB 11 docker image, Redmine::Database.mysql_version is 11.1.2-MariaDB-1:11.1.2+maria~ubu2204, which leads to an error in Gem::Version.new. The attached patch attempts to clean up the version string into the expected major.minor.patch format.
