**Description**

Following [#39862](#39862) I wonder: wouldn't it be neater to add a dedicated proxy method to Redmine::Plugin (something like Redmine::Plugin#attachment_object_type) for Redmine::Acts::Attachable::ObjectTypeConstraint.register_object_type? This way plugin authors don't have to reach into Redmine core internals when implementing AAA for their own plugin models themselves. How do other people think about this?
