Description

We would like to request the ability to embed images in Wiki Pages, as we basically use the Wiki to record all finalised systems and concepts, for which some require images to support them. At this stage we are simply adding them as attachments, but it makes for a much cleaner and easier to understand wiki page if the images were embedded.

History

#1 - 2007-08-02 15:54 - Jean-Philippe Lang

Once uploaded as attachment, your image (say image.png) can be embedded in the page with this tag:
  image.png

For a floating image:
  image.png (floating right)
  <image.png (floating left)
