

Redmine - Defect #40075

undefined local variable or method `users_context_menu_path'

2024-01-17 10:30 - Bruce Bongo

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	5.1.1
Resolution:	Invalid		
Description			
This happened when i click on Administration->Users (5.1.1.)			
<pre>redmine-redmine-1 I, [2024-01-17T09:59:02.987907 #1] INFO -- : Rendered users/index.html.erb within layouts/admin (Duration: 2.7ms Allocations: 5962) redmine-redmine-1 I, [2024-01-17T09:59:02.988143 #1] INFO -- : Rendered layout layouts/admin .html.erb (Duration: 2.9ms Allocations: 5988) redmine-redmine-1 I, [2024-01-17T09:59:02.988431 #1] INFO -- : Completed 500 Internal Server E rror in llms (ActiveRecord: 2.1ms Allocations: 10040) redmine-redmine-1 F, [2024-01-17T09:59:02.989101 #1] FATAL -- : redmine-redmine-1 ActionView::Template::Error (undefined local variable or method `users_contex t_menu_path' for #<ActionView::Base:0x0000000001efa0>): redmine-redmine-1 1: <%= form_tag({}, data: {cm_url: users_context_menu_path}) do -%> redmine-redmine-1 2: <%= hidden_field_tag 'back_url', url_for(params: request.query_paramet ers), id: nil %> redmine-redmine-1 3: <div class="autoscroll"> redmine-redmine-1 4: <table class="list odd-even users"> redmine-redmine-1 redmine-redmine-1 app/views/users/_list.html.erb:1 redmine-redmine-1 app/views/users/index.html.erb:21 redmine-redmine-1 app/controllers/users_controller.rb:72:in `block (2 levels) in index' redmine-redmine-1 app/controllers/users_controller.rb:66:in `index' redmine-redmine-1 lib/redmine/sudo_mode.rb:61:in `sudo_mode'</pre>			
On Redmine 5.0.7. it works without an error

- Status changed from New to Closed
- Resolution set to Invalid

It seems that when upgrading your Redmine, you have not replaced some of the files with their respective versions from the new Redmine. Specifically, you likely kept the config/routes.rb file from your previous version (which is an wrong and can result in all kinds of errors).

When upgrading Redmine, you have to use ALL files form the new version and just keep some local configuration. From the config directory, the only allowed customization are in the following files (and which are consequently the only files you should keep from your existing Redmine version when upgrading):

- config/database.yml
- config/configuration.yml
- config/additional_environment.rb (if it exists)

All other files in the config directory (notably including config/settings.yml) are part of the current Redmine release and must not be shared between different Redmine versions. They are not intended to be edited.

#2 - 2024-01-18 10:20 - Bruce Bongo

I used the official Docker image, meaning the theory involving files from the old version is a bit risky.
I need a few more days; then, I will review the files in the versions again and enter the results here.
