

Redmine - Patch #40194

Fix error in clear\_disabled\_fields method when IssuePriority is missing

Description			
Hello			
The clear_disabled_fields method in the Redmine codebase raises a NoMethodError exception when called, and the IssuePriority model is missing. This occurs due to an attempt to access the id attribute of IssuePriority without verifying its presence. The proposed fix ensures that the method gracefully handles the case where IssuePriority is missing by checking for its presence before accessing its attributes. I propose this patch

History

- #1 - 2024-02-06 06:08 - Go MAEDA
- Related to Defect #38636: NoMethodError when creating/updating an issue if all issue priorities are disabled and no default priority is set added
- #2 - 2024-03-07 12:36 - Ondrej Masita
- Default Docker Hub image will error out when issue is created with same error, because Priority field is marked mandatory and enumeration contains no values. This makes out-of-box-experience frustrating, because the solution does not work. This is covered in <https://www.redmine.org/boards/2/topics/17160>.
