Description			
Hi there,			
I have too many project needed to enable inherit member. Can I enable it from rails consle just like I use command to enable module for each project?

The answer is yes, but please request help using Forums.

It should be something like this:

```
irb(main):001> project = Project.find(<project_id>)
irb(main):002> project.inherit_members = true
irb(main):003> project.save
```
