

Redmine - Defect #40348

Parent Task field not available in Import issues screen

2024-03-05 22:55 - Francisco Vega

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Importers	Estimated time:	0.00 hour
Target version:		Affected version:	5.1.2
Resolution:			
<div>Description</div> <div>Hi, I'm having troubles when importing issues. I make an import of 5 tasks. Then, I assign those task to several subtasks in a CSV file as Parent Tasks, basically to import all subtasks in this second step. However, when importing, the field "Parent Task" doesn't appear in the list, so I can't make . Parent TaskField is active in the corresponding tracker. I test it in 2 different instances (4.2.2. and 5.1.2.), and they have the same problem. I can't find a configuration for this, is there someting that I'm missing? Many txs! (sorry, my instance is in spanish. The field name in spanish for "Parent Task" is "Tarea Padre", and is not there) clipboard-202403051849-2kdqp.png</div>

I second this - the How To guide indicates the column header should be "Parent" but this does not appear to be correct?

#2 - 2025-03-20 18:01 - Justin Hemming

I also tried Pid as per #50972

#4 - 2025-03-20 18:12 - Justin Hemming

Column header needs to be "Parent Task"
