### Description

I hava a Redmine 5.1.2.stable executed in container, and I use Apache HTTPD to proxy https to http port 3000. Evertyhing is working perfect, but my webpage is scaned by system and get a "Site does not enforce HTTPS" issue. It says my login URL's back url is http, not https. But all my service is running in https URL. How can I solve this issue to be

https://redmine.XXX.com/login?back\_url=https%3A%2F%2Fredmine.XXX.com%2F

not

https://redmine.XXX.com/login?back\_url=http%3A%2F%2Fredmine.XXX.com%2F

#### History

C S wrote in #note-1:

Make sure that under Administration->Configuration the protocol has been set from http to https...

Already configure as https, and work fine. Only login's back\_url not work.

### #3 - 2024-03-30 08:42 - Go MAEDA

Does adding the following configuration to the reverse proxy server set up with Apache fix the problem?

RequestHeader set X-Forwarded-Proto "https"
