Target version:		Affected version:	5.1.1
Resolution:			
Description			
Dear masters Currently, I'm using redmine 5.1.1. I configured send notifications via O365 email. The problem is send mail rate limit is 30 emails/minute. Is there any solution for this or is there any plugin can control that only send 30 emails/minute then continue to send later ? Thanks for your support

- Status changed from New to Closed

This is discussed in [How to control how many email send per minute in redmine ...](#)

In short: There is no builtin way to limit or queue the notification mails that way. As Redmine is a collaboration software, a small mail limit is likely to cause quite some issues. You should not use an end-user mail provider to send the notification mails as these providers usually impose a lot of restrictions. Instead, you can send your own mails or use a mail provider who is specialized in transactional mail sending as recommended in the forum thread.
