0. environment: production

1.  
in settings.yml set  
default\_language:  
default: en

- 2. set language to Polish on /my/account page
- 3. create an issue
- 4. notice is in english (should be in polish)

I will just add that some notices get their language wrong:

another example:

- 1. user registers with a different language
- 2. administrator gets email to activate account
- 3. administrator activates account
- 4. notice about account being now active shows in new users language, not on administrators language

Kind regards
