

Redmine - Feature #410

Add feature to wiki: inline-images

2007-08-27 11:45 - Neil Rodrigues

<b>Description</b>			
<p>I've been using PmWiki (<a href="http://www.pmwiki.com/">http://www.pmwiki.com/</a>) prior to installing Redmine, and one feature that really helped was the ability for the Wiki to insert images.</p> <p>For input, all the user types is the url to the jpg, i.e.:</p> <p><a href="http://www.domain.com/pic.jpg">http://www.domain.com/pic.jpg</a></p> <p>And the wiki automatically converts that to the picture. I assume it works by scanning all words for something that starts with "http://" and ends with ".jpg", then converts it to an &lt;img&gt; tag.</p>			

History

Redmine uses textile syntax. Textile's syntax for inline images is:  
pic.jpg  
(see textile reference: <http://hobix.com/textile/>)

Redmine specific: if pic.jpg is an attachment of your wiki page, you can simply write pic.jpg

Did you know about this or is your request about getting rid of the exclamation marks ?

#2 - 2007-08-27 14:46 - Neil Rodrigues

Oh thanks! I had no idea there were more text options than what was specified in the popup box.

There's no need for you to get rid of the exclamation marks, but maybe adding these other features into the popup box, or a link to <http://hobix.com/textile/> in there for "More..." would be great.

Thanks.
