#2 - 2024-09-19 15:49 - Holger Just

- Status changed from New to Needs feedback

Usually, this occurs if the configured path to the repository is not right (e.g. if you define a relative path), or the system user running the Redmine sever process has no permission to access the repository on disk, or the git shell-out failed (e.g. because git is not installed on the server).

You may have a look into your logs in logs/production.log. If the git command failed, the error details should be added there.

#3 - 2024-12-28 09:07 - Go MAEDA

- Status changed from Needs feedback to Closed

- Resolution set to Invalid
