

Redmine - Defect #41320

Child Tickets / Cross project-child issue

2024-09-27 15:38 - Stefan Mueller

Resolution:	Invalid		

Description

In configuration of redmine I have chosen in the list box "Allow cross-project child issues" the feature "With all projects".

Now I have two projects, which are not in same project tree. Let us denote project A and project B. Both are independent from each other.

In project A I have a ticket 1 in tracker A.

In ticket 1 I create a child ticket and choose it to project B with tracker B. The child ticket is created in tracker B, project B correctly. But the child ticket is not listed in ticket 1. The dependency is not shown.

I think that this is a bug.

The ticket will be shown, if project A and B has a mother project C.

If this is intended, then the option "With all project" in list box "Allow cross-project child issues" doesn't make sense and is obsolete.

Thanks and Best Regards

Stefan

Please close the ticket. I'm wrong.  
Everything is working correctly.  
I'm sorry

#2 - 2024-10-03 01:48 - Go MAEDA

- Category deleted (Database)
- Status changed from New to Closed
- Resolution set to Invalid

Thank you for your feedback. I am closing this issue.
