

Redmine - Defect #4136

Wrong users are created during trac migration to redmine

2009-10-29 10:56 - Ali Nebi

Status:	Closed	Start date:	2009-10-29

Target version:		Affected version:	0.8.5
Resolution:	Invalid		
Description			
Hi,			
i just installed redmine and i'm testing migration of trac to redmine. I see a problem with migrating trac users to redmine. Some of the users are created properly, but there are new users that are combination from 2 existing users.			
Let's say that we have following users in trac:			
username	Firstname	Lastname	Emails
user1	User1	Name	user1@domain.tld
user2	User2	Name	user2@domain.tld
user3	User2	Name	user3@domain.tld
user4	User3	Name	user4@domain.tld
user5	User4	Name	user5@domain.tld
After trac migration in user lists in redmine i see these:			
username	Firstname	Lastname	Emails
user1	User1	Name	user1@domain.tld
user2	User2	Name	user2@domain.tld
user3	User3	Name	user3@domain.tld
user4	User4	Name	user4@domain.tld
user5	User4	Name	user5@domain.tld
user2--user4	user2-	user4	user2--user4@foo.bar
user2--user5	user2-	user5	user2--user5@foo.bar
user3--user1	user3-	user1	user3--user1@foo.bar
user3-user2	user3-user2	-	user3-user2@foo.bar
I don't have in session_table users like user2--user4. What is expected is these wrong users to not be created.			

History

#1 - 2009-10-29 11:04 - Ali Nebi

Additionally we have installed on trac several plugins and during migration from trac redmine created these users:

Timing-and-Estimation-Plugin	Timing and Estimation Plugin	-	Timing-and-Estimation-Plugin@foo.bar
trac trac	-	trac@foo.bar	
WorkLog-Plugin	WorkLog Plugin	-	WorkLog-Plugin@foo.bar
root root	-	root@foo.bar	

We don't have these users in "session_attribute" and "permission" tables.
Probably existing users in trac must be taken from "session" table and the attributes like name, roles must be taken from "session_attribute" table.

We are using trac-0.11.5

#2 - 2009-10-29 12:27 - Ali Nebi

- Status changed from New to Resolved

Problem was in trac database, because for some tickets were set in owner field mutiple users this way: "user1, user3". then redmine check this field and create wrong user name.

Users that come from plugins are creating because some wiki pages belongs to these authors.

#3 - 2009-10-29 18:52 - Jean-Philippe Lang

- *Status changed from Resolved to Closed*
- *Resolution set to Invalid*

Thanks for the feedback.
