

Redmine - Feature #415

Daily Digest option for Mail Notifications

2007-08-28 09:18 - Neil Rodrigues

Description <p>We tend to have a lot of issues when using Redmine, and mail notifications are set to notify on everything. It would be great for users to have the option to have a Daily Digest rather than immediate notification.</p> <p>A Daily Digest is essentially an e-mail containing everything the Activity link shows, but is sent out only once daily.</p> <p>However, if an issue is Assigned to someone, or if someone requests a Watch notification, those e-mails should always be sent immediately, regardless of Daily Digest status.</p>

I created a duplicate issue: [#3412](#).

As an addition to this issue, I think it should be configurable how frequent you receive a digest (hourly, daily, weekly).

I also think is a good idea to group changes by issue. That way you can quickly see what happened with an issue.

#2 - 2009-06-12 17:32 - Anonymous

Even better would be if you could set most things to be included in digest, but have certain things, like when a new high-priority issue is submitted, be sent immediately.

#3 - 2009-08-04 22:16 - Marc Dworkin

This would be a very useful feature. Perhaps notification settings could be more finely associated with workflow transitions

#4 - 2009-08-14 21:49 - Luiz Carlos Junior

Although all comments seem to be interesting, it would make a great difference if Redmine just provides an user option to receive a simple daily digest e-mail per project.

In the first version, I think it would be enough if this e-mail contained just a list of all changed issues with its number and subject (and a link). Since Redmine logs all changes, if one user is interested in a certain issue he could easily click on the link and see the latest changes.

+1 on this issue and note:4

#6 - 2010-03-16 17:53 - Mike Johnson

I agree with Kardan: +1 on this issue and note:4

#7 - 2010-04-14 13:41 - Andreatta Sébastien

Is anyone working on implementing something like this?

#9 - 2010-08-09 16:54 - Aaron Steiner

+1

I am trying to convince people at work to start using Redmine for tracking our various projects but the barrage of emails generated by just a few developers will be a major impediment.

Best would be to offer some time based rules, like daily at 8.00 pm , weekly every thursday at 3 am, every 3 days at 10 pm, immediately..

..and some content based rules, like, a lists of all items with short decription (only topic and link), or the whole ticket description plus the changes..

A big vote for this one, and agreeing with Luiz Carlos, the first step could be a very simple (digest or not digest and the only digest is once a day option), then of course all the other features are nice but to get going just a simple digest mode would be very handy.

I ran a digest task on my Trac projects for the last 5 years using a script I found and highly modified. Now that I'm switching to Redmine, I went looking for something similar.

Seems like enough interest that a plugin should exist already. Well, now it does: <http://www.redmine.org/plugins/digest>

I had not written (or read) a lick of Ruby code until last week, so improvement patches are definitely welcome.

Great idea!

#25 - 2013-06-26 13:16 - Carsten van Raalten

Please also take a look at this solution/plugin. Instead of daily digests this plugin has more intelligence to notify you of 'issue-risks' up front.

<http://www.redmine.org/plugins/alerts-early-warning-system>

#26 - 2014-01-08 19:46 - Viktor Berke

From what I've seen the available plugins are either of poor quality or simply incompatible, etc. So I decided to do it on my own. Unfortunately (?) I'm no Ruby expert so I just wrote some shell scripts to query the data directly from the DB. Here it is:

<https://github.com/bviktor/redmine-digest>

+1 , would be very welcome!
