Description

Hi, this patch is a to me, a natural extension to "Link values to URL" feature for text field format custom field.

Suppose we have a requirements like the following: "I'd like to show on view for a text custom field what I want based on a regex mask in the same way applied to format a link value"

See for example, for a custom field like this:
  clipboard-202410191719-pylkh.png

Will be shown as:
  clipboard-202410191724-4bqin.png

supposed a field populated as: "1234 - 0000"

_____

This was vital to me to manage an integration with an external sistem that passed to redmine ticket number built with pattern "ticket number - UID on source" and I do not wanted to show UID in show.
What about?
Thanks
