**Description**

If I use the child_pages macro on a Wiki page and go to the page through (for instance) activity, so I get the version added as a get (ex wiki/WikiPage?version=2), it throws out the error:

> *Error executing the child_pages macro (With no argument, this macro can be called from wiki pages only.)*

It works as it should if the page is requested as normal (wiki/WikiPage).

I'm running

- Apache 2.2.12
- MySQL 5.1.37
- Ruby 1.8.7
- Rails 2.3.4
- Redmine r2992

And I can't find any error text regarding the problem in either production.log nor the apache logfile.

production.log just states:

> *Processing WikiController#index (for MYIPADRESS at 2009-11-02 14:06:18) [GET]*
> *  Parameters: {"action"=>"index", "id"=>"3", "page"=>"Regler", "version"=>"2", "controller"=>"wiki"}*
> *Rendering template within layouts/base*
> *Rendering wiki/show*
> *Completed in 471ms (View: 382, DB: 20) | 200 OK [http://MYWEBPAGE.COM/redmine/projects/3/wiki/Regler?version=2]*

**Associated revisions**

**Revision 3006 - 2009-11-04 13:36 - Jean-Philippe Lang**

Fixed: child_pages macro fails on wiki page history (#4152).

**History**

# Addendum

The wikipage throws no error if I specify child_pages(WikiPage).

**#2 - 2009-11-04 13:31 - Jean-Philippe Lang**

*- Category set to Wiki*

*- Status changed from New to Closed*

*- Target version set to 0.9.0*

*- Resolution set to Fixed*

Fixed in r3006.
