Target version:		Affected version:	
Resolution:			
Description			
While looking at <a href="#">r23548</a> , I noticed a typo (basically the same as <a href="#">#36149</a> ) in the name of the Javascript function toggleExpendCollapseIcon ( <a href="#">source:/trunk/app/assets/javascripts/application.js@23548#L45</a> ); it should read toggleExpandCollapseIcon.			

History

I'm not sure if it's worth renaming the function, or if we should add the correct one and deprecate this one.
