Category:	REST API	Estimated time:	0.00 hour
Target version:			
Resolution:			

Description

This modification:

- Checks if 'possible_values' is included in the API response
- Verifies the custom field has a possible_values method
- Makes sure possible_values isn't blank
- Adds an array of possible values for each custom field that meets these conditions

You can then request the API with:

```
GET /issues/2.xml?include=attachments,journals,possible_values
```
