

Redmine - Defect #42588

Generated SVG sprite icon URL does not include digest when rendered in a JSON response

2025-04-16 07:07 - Ammar Githam

Status:	Needs feedback	Start date:	
Priority:	Normal	Due date:	
Assignee:	Ammar Githam	% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:		Affected version:	6.0.4
Resolution:			
Description The <code>sprite_icon</code> method generally generates a SVG tag as below: <pre><svg class="s18 icon-svg" aria-hidden="true"> <use href="/assets/icons-35b4b65e.svg#icon--add"></use> </svg></pre> But when rendered via <code>render json:</code>, the <code>use</code> tag's <code>href</code> does not contain the digest: <pre>{ "id": 1234, "label": "Assignment #1234: Test issue", "value": 1234 "icon": "<svg class=\"s18 icon-svg\" aria-hidden=\"true\"><use href=\"/icons.svg#icon--issue\" ></use></svg>" }</pre> I have attached a patch file to patch the <code>AutoCompletesController</code> to reproduce the bug. After applying the patch, trigger an issue autocomplete and check the response.

- Status changed from New to Needs feedback

`asset_path` is not available in the controller, is an [Action View helper](#).

I think the best way is to render the json from a view, to access the path using `ActionController::Base.helpers.asset_path('<path_to_image>')` or to move the method to a helper where you can include `include ActionView::Helpers::AssetUrlHelper`.

Please let me know if you fixed your issue.

#2 - 2025-04-26 13:04 - Marius BĂLTEANU

- Assignee set to Ammar Githam
