Description

Hello,

I would like to propose the ordering of **Related issues** by status and by priority level instead of the actual unordered status.

Please find in attachment a patch (order_the_related_issues_by_status_and_priority.patch) that works for redmine v6 & v5 stable branch

This screenshot is made on the fresh development redmine, the Related issues are ordered accordingly.

Relevant tests were passing with ruby 3.3.8 on main branch (of github) somehow not really working on v6 but it does not seem related to my modifications (see redminetests.txt)

I never used subversion so I don't really know how to do from there, but I would happily help

Have a good day !
