Redmine - Defect #4275

Wiki does not support ordered list

2009-11-24 00:21 - Kamil .

Status:	Closed		Start date:	2009-11-24
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	

Description

Using following syntax in the wiki:

```
a. foo
a. bar
a. something
```

should result in

```
a. foo
b. bar
c. something
```

Same as

```
1. foo
1. bar
1. something
```

should result in

```
1. foo
2. bar
3. something
```

regards

History

#1 - 2009-11-24 04:56 - Mischa The Evil

- Status changed from New to Closed

- Affected version (unused) deleted (0.8.5)

- Resolution set to Invalid

- Affected version deleted (0.8.5)

Both ordered as well as unordered lists are supported:

- Ordered list example:

  This

  ```
  # foo
  # bar
  # lorem
  ```

  renders as:

1. foo
2. bar
3. lorem

- Unordered list example:

    This

    ```
    * foo
    * bar
    * lorem
    ```

    renders as[1]:

    - foo
    - bar
    - lorem

[1] with one exception that I've used indention to markup this post which changes the bullet-type.

#2 - 2009-11-24 09:54 - Kamil .

- Status changed from Closed to Reopened

So:
1) you should document "#" ordering here: http://www.redmine.org/wiki/redmine/RedmineWikiFormatting
2)You still do not support a. b. c. ordering

regards

That page states the following:

> For things such as headlines, bold, tables, lists, Redmine supports Textile syntax. See http://hobix.com/textile/ for information on using any of these features. A few samples are included below, but the engine is capable of much more of that.

However the hobix.com domain does not respond (anymore I recon). It should either be replaced with another link or a better explanation.

#4 - 2009-11-24 15:05 - Michael Aye

Ordered and unordered lists are documented by the Help link that appears in the upper right corner of **all** edit boxes.
The offline hobix.com link is bothering, though. Had to search myself recently, to find all the table features that are supported.

#5 - 2009-11-24 15:06 - Michael Aye

then again, tables are shown in http://www.redmine.org/wiki/redmine/RedmineWikiFormatting, so **d'oh** for me. :)

By reading an article regarding textile and Redmine it stated that Redmine uses RedCloth which has a textile reference page which is quite good.

Checking further RedCloth had a link called Hobix Textile Reference that linked to http://redcloth.org/hobix.com/textile/ which seems to be the orphaned page Redmine linked to on the RedmineWikiFormatting page.

There is actually a short info regarding the disappearance of hobix.com on the RedCloth site.

Added. Note that this was document in the "Help" link, just above any textarea in the application.

2)You still do not support a. b. c. ordering

This is not a defect.
