

## Redmine - Patch #4277

### Add "hide prefixed projectname from issuesubject on issuelist" setting

2009-11-24 01:54 - Mischa The Evil

| <p>This issue is extracted from <a href="#">#3100</a> and it's relatives. The patch adds a new system-wide, issue-tracking setting (<code>hide_prefixed_projectname_from_issuesubject_on_issuelist</code>) which provides the administrator an option to hide the subproject name (which is prefixed in front of the issue descriptions on mainproject issue lists) completely. Such a setting can be useful if the site is configured to display the project-column be default.</p> <p>The default setting is equal to as it is currently(the projectnames are shown prefixed to the descriptions).</p> |                |                        |                   |

### History

#### #1 - 2009-11-24 01:58 - Mischa The Evil

- File `add-setting-hide_prefixed_projectname_from_issuesubject_on_issuelist-r3078.patch` added

Oops, forgot to actually attach the patch...

*edit: also added some relations*

#### #2 - 2009-11-27 22:51 - Jean-Philippe Lang

What about fully removing the project name from the issue subject ? since the project can now be added as column.

#### #3 - 2009-12-08 02:31 - Mischa The Evil

Jean-Philippe Lang wrote:

Good idea. I see you've removed the project name prefixed to the issue subject already in [r3112](#).

Maybe it's best to also enable the project column as a default issue-list column in the default configuration ([source/trunk/config/settings.yml#L127](#))?

#### #4 - 2009-12-08 02:34 - Mischa The Evil

- Status changed from *New* to *Resolved*

This patch can be closed without further changes as being obsoleted by changes in the core, when the project column is displayed on issue-lists by default IMHO.

#### #5 - 2009-12-23 23:10 - Mischa The Evil

Jean-Philippe, What do you think of this? Now that the project name prefixes on issue-subjects on the issue-list are removed and without the project-column **not activated** by default on issue-lists, the situation can occur that a user interprets the issue-list as being *for the current project* only. In my opinion such should be avoided if possible... ;)

#### #6 - 2010-11-14 01:03 - Mischa The Evil

- Status changed from Resolved to New

I need to make my statement clearly more obvious. Here it comes: "Now that the projectname-prefixes on issue-subjects on all the issue-lists are removed and without the project-column **not activated** by default on project issue-lists **and** with the setting ' *Display subprojects issues on main projects by default* ' set to TRUE, the situation can occur that a user interprets the project issue-list as being *for the current project only* while it also includes issues of the projects' sub-projects (and their sub-projects, I guess...)"

For the above I'd suggest to enable the project column as a default issue-list column in the default configuration ( <source:trunk/config/settings.yml#L127>).

Note: The patch could be considered obsolete.
