

Redmine - Patch #42794

Hide irrelevant information when printing

2025-05-31 09:47 - Luc Luc

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:	6.0.6		

Description

When using native browser printing (Ctrl+P or Ctrl+Shift+P) there are several views where irrelevant information are still printed, (subjectively?) "uglifying" the printed output, for example:

- in time entries list, an extra / stray column with action buttons (patch attached)
- in issues list, an extra / stray column with with action buttons (patch attached)
- in version lists, an extra / stray column with action buttons (patch attached)

In my opinion I also consider irrelevant for printing the list of formats and update information for wiki pages, so please find attached a (most optional) patch that hide those sections too.

All patches are very simple, they just add the hide-when-print class to the corresponding elements that should not be displayed when printing.

The patches where generated and tested on Redmine version 6.0.5.

I didn't know what category these patches should be assigned to (no "Printing" category found) so I picked "UI".

As a side note, I extensively use native printing (Ctrl+P) to generate PDF output reports and wiki based documentation instead of exporting to various formats, because I find it more convenient and most importantly it retains the overall look and feel of Redmine, matching the original formatting.
