Resolution:				

Description

Problem

"Link" custom field only allows http:// and https:// URLs, rejecting mattermost:// or slack://. This blocks tool integration. Example: mattermost://server.com fails with "URL is invalid".

Solution

- Allow any protocol in "Link" fields.
- Add regex URL templates, e.g., regex https?:(.*) to mattermost://%m1%.

Example

"Mattermost Link" field: input https://server.com/channel, output mattermost://server.com/channel to open Mattermost app.
