

Redmine - Defect #42997

Edit custom query doesn't allow column selection

2025-07-10 11:31 - Roland Giesler

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues filter	Estimated time:	0.00 hour
Target version:		Affected version:	6.0.5
Resolution:	Invalid		
<div>Description</div> <div>Selecting to edit a custom query doesn't allow the selection, and thus the adding or removing of a column from the query.</div> <div><div>clipboard-202507101130-tzz6v.png</div><div>This works fine when started with a new query and then saving it, but not when editing an existing query.</div></div>			

History

#1 - 2025-07-10 12:12 - Holger Just

- Status changed from New to Closed
- Resolution set to Invalid

When you initially save the the query while having the default columns selected, the saved query will also inherit the "Default columns" checkbox and thus will always show the configured default columns. If you later want to customize the columns of just this query, you have to uncheck the **Default columns** checkbox in the **Options** box of the saved query first.
