Redmine - Feature #43068

Can Redmine 1.3.0.stable (MySQL) run on Windows Server 2019 or 2022?

Description

We have been using the old version of Redmine 1.3.0.stable (MySQL). Is there any compatibility issues when upgrading to Windows Server 2019 or 2022?

Thanks

We can not provide any support for such an old version of Redmine anymore. You should upgrade to a newer version. Please see [Download](#) for supported versions.

With that being said, you will likely experience all kinds of issues when trying to install the very old versions of Ruby, Rails and other gems on modestly modern platforms. I would not recommend this.

In any case, please use the forums to ask administration and usage questions. The issue tracker here is only used for actual development of Redmine.
