Redmine - Feature #432

Custom Email templates, system wide and per project, through web interface.

Description

This is something we came across.
We needed to define a line of text at the bottom of each email: " Please contact Director of IT if your issue wasn't resolved properly". This is pretty straight forward, just went into _issues.rhtml and adjust it. But it makes it system wide, and you need to be a developer or at least have access to source. I was wondering if it would be a good idea to add it as a feature to the admin interface, so users could define stuff like that on per project basis, modify their templates or something, or just add a little message, like a link to a demo page or something, so it is not hard coded into email template.

Thank you

Hi,
As of r858, emails footer can be customized in the admin interface
(Admin -> Mail notifications).
For now, this setting can not be overridden at project level.

+1 for being able to override the system-wide emission e-mail address in each project.

#3 - 2011-03-24 10:39 - Toshi MARUYAMA

- Category set to Email notifications

- Subject changed from Custom Email Tamplates, system wide and per project, through web interface. to Custom Email templates, system wide and per project, through web interface.

Typo.
