Target version:	Candidate for next minor release		
Resolution:			
Description With version 6.1.0, the automatic list markers were added. Using the input SHIFT+ENTER should not insert a new list marker, just start a new line without a new marker. I think this is the standard behavior for text inputs. * First * Second `Shift+Enter` just new Line * Third added automatik with `Enter` double Enter here it continues

- From what I've observed, there are services like Slack and Backlog where pressing Shift + Enter also inserts a list marker, so it seems not all services follow the same specification.
That said, many people are accustomed to this behavior on platforms like GitHub, so I think it's a good idea to support this specification.
- This is a little different from that feature, but in the current version of Redmine, if you press the Enter key while only a marker remains, the marker is removed immediately to make it easy to delete unwanted markers. (The same behavior as GitHub.)
