

Redmine - Patch #43259

Convert jstoolbar to ES modules and class syntax.

2025-09-28 06:03 - Takashi Kato

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:	Marius BĂLTEANU	% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:	7.0.0		
Description			
<p>This patch is based on a branch from #43165, with minor modifications.</p> <ul style="list-style-type: none">• Converting the entire library to ES modules eliminates the risk of variable name collisions.• Refactored jstoolbar from the old prototype-based syntax to a more readable class syntax.• Switched DOM element creation from JavaScript to ERB, which makes preparing and cloning DOM elements easier by using the <template> element.• Moved all jstoolbar locales to config/locales to simplify i18n. * Added the missing tasklist locale for both ja and en.• Integrated the list-autofill controller into jstoolbar as both controllers are used in the same places. <p>Applying this patch along with #42521 enables the implementation of #40310.</p> <p>This patch can be applied to r24014</p>
