

Redmine - Defect #4338

Not perfect svn auth thru perl module

2009-12-04 12:14 - Frank Costello

Status:	Closed	Start date:	2009-12-04
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Permissions and roles	Estimated time:	0.00 hour
Target version:	0.9.0	Affected version:	0.8.7
Resolution:	Fixed		

Description

Its really greate feature, but i have one valueble notice:

svn repo here:

<http://example.com/svn/project1>

In redmine user John is a participant of Project1 but he dont have access to repo, and in redmine he dont have module. But if he goes to <http://example.com/svn/project1> and type his login and password he will got access to repo. Its very bad for me, because i have some people that must not have access to repo and must have access to trackers. thank you.

Unfortunately, я не говорю по-русски (well, not anymore than that, obviously ;-), but I think we will find a solution for that.

So basically, what you are asking for should be solvable with the roles and permissions in Redmine. Have a look at *Administration* (top left menu) > *Roles and permissions* > *Permission Report* (at the bottom), there you have an overview of all permissions you can give to a particular role or "class of users". Scroll down a bit to get to the *Repository* section, in which you have the *Browse repository* and *Commit access* permissions. Those give respectively read and write access to the *Repository* tab and the "real" repository of a project.

Please note that for a public project, anyone logged in but not in the project will have the role *Non member*, and for a public Redmine, anyone not logged in has the role *Anonymous*. For more information, have a look at the [guide](#), it might give more detail on some options.

#3 - 2009-12-05 16:46 - Frank Costello

i swear that no one box is checked in <http://localhost/redmine/roles/report> but when user goes to localhost/svn/project1 and type login:pass he can view repo. maybe it is a bug?

#4 - 2009-12-14 14:02 - Thomas Pihl

Are you sure you are using redmine for authentication?

See http://www.redmine.org/wiki/redmine/Repositories_access_control_with_apache_mod_dav_svn_and_mod_perl

```
PerlAccessHandler Apache::Authn::Redmine::access_handler
PerlAuthenHandler Apache::Authn::Redmine::authen_handler
```

are the crucial parts.

PerlAccessHandler Apache::Authn::Redmine::access_handler

PerlAuthenHandler Apache::Authn::Redmine::authen_handler

are the crucial parts.

/T

Ofcourse i use redmine authentication, but this method auth whole list of project participants, not only roles with access to repository.

#6 - 2009-12-22 19:02 - Jean-Philippe Lang

- *Status changed from New to Closed*

- *Target version set to 0.9.0*

- *Resolution set to Fixed*

Fixed in [r3215](#). Redmine.pm now checks that the user has the browse_repositories permission.
