Description

On the issue details page (issues/show) any code changes in the repository should be listed with links to view the repository page for that commit / update event.

History

#1 - 2007-09-23 05:23 - Jean-Philippe Lang

Currently, if you reference an issue in a commit message, the issue/changeset association is recorder and displayed on the issue details page.

Exemple: http://demo.redmine.org/issues/show/1
On the right of the description, you should see related changesets (r5 in the example).

What else is your request about ? Do you want to be able to manually update this issue/changeset association ?

#2 - 2007-10-03 23:33 - Damien McKenna

I don't see the association list you mention on the issues/show page (am
running rev 793)?

#3 - 2007-10-06 05:01 - Jean-Philippe Lang

Look at the attachment (extracted from
http://demo.redmine.org/issues/show/1)

And if you go on r5, you will see a link to Bug #1

#4 - 2007-10-06 16:03 - Damien McKenna

I've attached a sample of how Unfuddle lists changes, it would probably work
better in Redmine to show them vertically before the History list, or maybe list
them as part of the history. When a changeset is listed it should also have a link
over to the repository view.

I'm going to submit another feature on how changesets are handled.

#5 - 2008-01-20 10:38 - Jean-Philippe Lang

Done in r1085.
