Description

at this moment Redmine analyse only themes dir in *RAILS_ROOT*

module Redmine::Themes

```
def self.scan_themes
  dirs = Dir.glob("#{RAILS_ROOT}/public/themes/*").select do |f|
    # A theme should at least override application.css
    File.directory?(f) && File.exist?("#{f}/stylesheets/application.css")
  end
  dirs.collect {|dir| Theme.new(dir)}.sort
end
```

if I want to create my own CSS that's enough for me

BUT

if I want to create my own views, I would be create a new plugin with redefined views of core

it is incorrect I think **my theme in the core, but the views in plugin**

what's why I suggest

- *add ability to Redmine Plugin Engine to support the themes for Redmine*
