Redmine - Feature #437

IMPORTER, import egroupware 1.2 TTS tickets or 1.4 Trackers

Description

It would be cool if there was support for migration of tickets/issues from other systems. For example egroupware.org .....We were using eGroupware.org 1.2 which has an external more or less standalone TTS ticketing/issue module which is no longer used in 1.4 because 1.4 has a new integrated tracker. BUT 1.4 has a built-in IMPORTER to import previous TTS from 1.2 system, this Import_TTS.php (basically takes the TTS stuff from the old TTS table in the database and restructures it into new table of the NEW tracker) may help in creating an importer from TTS -> REDMINE . Might be worthwhile since egroupware has a good userbase, toprated at opensourcecms.com etc...

of tickets/issues from other systems.

There are already 2 importers available in current trunk: Mantis and Trac

That's great to hear, though I'd still like to see egroupware ticket/tracker included as well, three is better than two ;)
