Target version:		Affected version:	0.8.6
Resolution:	Duplicate		
Description I don't know if this is a bug or feature. I wonder that text enclosed in the < pre > </ pre > tag is rendered with the wiki syntax. I think this is not good. For example i try to make a dokumentation of a textstyle which is similar to the wiki syntax of redmine In this style i use _ to mark variables [[variable_1]] => [[variable_1]] [[variable_2]] But the brackets are rendered as wiki syntax and a link to an wiki page is generated. It would be nice that all text inside the pre tag is not rendered! Thank's			
Related issues: Is duplicate of Redmine - Defect #1288: Unable to past escaped wiki syntax in... <div>Closed2008-05-22</div>
