## History

### #1 - 2009-12-17 21:05 - Jean-Philippe Lang

Can not reproduce with latest trunk.

A non admin user with "create project" permission can see the "new project" link on the project list.

### #2 - 2010-01-07 05:15 - Oregon State University Central Web Services

It happens when the user in the appropriate role to create a project does not belong to a project.

For example, we set the manager permission to be able to create projects and subprojects.

User foo is created, and given the role as a manager, but not assigned to a group with projects or to any project individually.

foo logs in, does not see the "New project". If foo is subsequently added to a project with a role of manager, then foo is able to create projects.

It seems if a role is given the authority to create a project, it should be independent of if they belong to a project or not.

### #3 - 2010-01-10 15:05 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Invalid

A role is given to a user for a given project. So you can not give a role to a user that doesn't belong to any project.

*foo logs in, does not see the "New project". If foo is subsequently added to a project with a role of manager, then foo is able to create projects.*

*It seems if a role is given the authority to create a project, it should be independent of if they belong to a project or not.*

If you want users that doesn't belong to a project to be able to create project, you have to give the 'Create project' permission to the 'Non member' role.
