<b>Description</b>			
<p>Currently, the shipped version of the wiki formatting documentation does not mention nested lists. The syntax is a bit different (and I think better) than that of Trac's wiki, but I wasn't able to find docs on how it's done and instead asked on the IRC channel.</p> <p>I'm referring to these files:</p> <ul style="list-style-type: none"><li>- /help/wiki_syntax.html</li><li>- /help/wiki_syntax_detailed.html</li></ul>

Here is a patch file that documents sublist formatting for the current master. Most of the translations of this file seem to be the same. Presuming these may simply be links in a committer's dev environment, I've attached two patch files. The "en" file patches only the "en" version of the file. The "other-langs" file patches all the others that use the same words for the lists as the "en" version (Item 1, Item 2).
