Description

Current Redmine's version can includes some issues, but versions. So, Redmine cannot describe a version that relies on other version(s).

For example, I want to describe like following. version X includes issue #1,2,3, version Y includes issue #4,5,6 and version Z relies on version X,Y and issue #7.

```
issue#1 ---+
issue#2 ---+--- version X ---+
issue#3 ---+              |
issue#4 ---+              |
issue#5 ---+--- version Y ---+
issue#6 ---+              |
issue#7 --------------------+--- version Z
```
