| Description | | | |
| <p>Hi Eric, i've forked redmine to github and added a debian (default) branch at : git://github.com/kapouer/redmine.git</p> <p>The debian patches are in debian/patches :)</p> <p>Using gbp-pq (in git-buildpackage) would be really useful : git checkout debian gbp-pq import this creates a patch-queue/debian branch where patches are applied, so it's easier to work and cherry-pick from this branch.</p> <p>for gbp-pq usage, see : https://honk.sigxcpu.org/piki/development/debian_packages_in_git/</p> | | | |

Jean-Philippe Lang:

J r my Lal has done a great job with getting Redmine packaged up for Debain. I'm ok with pulling the Debian files he needs to build the package but I wanted to run it by you first to see if you had any thoughts.

#2 - 2010-02-18 10:40 - J r my Lal

I just updated the debian branch to the latest debian package 0.9.2-3 (not published on debian yet).
One important note : now using quilt 3.0 source format, which means debian patches are already applied.

The patches are split in three categories :

- patches to ensure rails 2.2 compatibility, which will be dropped when rails 2.3 gets into debian
- patches to ensure debian policy : more or less fixing paths, those ones might be interesting for you
- one patch that should not be there (i added a rest api for getting account info, will remove it soon)

Regards,
J r my.

#3 - 2010-02-18 10:42 - J r my Lal

i forgot to say that the patches are described in
debian/patches/

Also
debian/README.Debian
contains some informations about what they lead too.

#4 - 2010-06-19 10:54 - J r my Lal

Hello again.
I simplified my github fork for an easier review of applied patches in debian,
see <http://github.com/kapouer/redmine/tree/0.9-stable>

Now redmine debian package is using rails 2.3.5, so the main purpose of the patches
is to allow configuration of various paths for a system install of redmine.

Cheers,
Jérémy.
