

Redmine - Feature #4589

SJIS Encoded source-code not displaying properly

2010-01-15 07:09 - Jeffrey Jones

Description One of the programs used by my colleagues encodes all source-code files using SIJS character encoding. Unfortunately there is no way for this software to output to UTF-8 and re-encoding constantly would be very bothersome. Currently the "View file" part of the repository browser cannot handle sijs. Would it be possible to detect if a file was using sijs character encoding and take appropriate measures to display it properly in the browser?			

History

#1 - 2010-01-15 07:13 - Jeffrey Jones

My apologies, the encoding should read SJIS, not SIJS.

#2 - 2010-02-12 08:57 - Jeffrey Jones

- Status changed from New to Resolved
- % Done changed from 0 to 100

Just discovered the repository encoding option in administration which resolves the problem.

#3 - 2011-01-03 17:55 - Toshi MARUYAMA

- Subject changed from SIJS Encoded source-code not displaying properly to SJIS Encoded source-code not displaying properly
- Status changed from Resolved to Closed
