Resolution:		**Affected version:**	

Description

When the list of issues comes from a custom query the export to pdf generate an error.
This is probably due to the new feature of addiing custom_fields to the query.

This problem is fixed with the following patch:

Index: app/controllers/projects_controller.rb ==
--- app/controllers/projects_controller.rb   (revision 448)
+++ app/controllers/projects_controller.rb   (working copy)

```
@ -337,7 +338,7 @
render :action => 'list_issues' and return unless @query.valid?

@issues =  Issue.find :all, :order => sort_clause,
-                        :include => [ :author, :status, :tracker, :priority ],
+                        :include => [ :author, :status, :tracker, :priority, :custom_values  ],
                         :conditions => @query.statement,
                         :limit => Setting.issues_export_limit
```

History

#1 - 2007-04-21 19:08 - Jean-Philippe Lang

This was fixed in revision 452.
Thanks.
