

Redmine - Feature #4611

HTTP access to issue subject field

Target version:			
Resolution:			
Description I would like to be able to retrieve the subject for a given bug ID via a HTTP request. e.g. if I entered into my browser: http://redmineserver:8181/redmine/issues/*description*/130 I would receive just the subject text (with no html formatting) for issue 130. An alternative might be http://redmineserver:8181/redmine/issues/130?description Which would then allow the following as well: http://redmineserver:8181/redmine/issues/130?status http://redmineserver:8181/redmine/issues/130?priority http://redmineserver:8181/redmine/issues/130?assigned_to Having this feature will allow me to show the issues description within other systems, leading to a more joined up system and increasing my groups productivity. Many thanks for your consideration

Hello Paul,

Please have a look at the [REST API](#) and especially at the [API for issues](#), you will find that while you don't get only the parts you mentioned, you will be able to parse it with an XML parser.

#2 - 2010-01-19 17:49 - Felix Schäfer

Oh, I forgot to mention that this will be available in [0.9.0](#), or if you want to test it now, grab trunk or 0.9-stable from the repositories.
