Redmine - Feature #4670
Fine tune "New Issue"
2010-01-27 20:50 - Jakob Meissner

Description

Why can anybody (=any role) assign a due date, estimated time, %done, assigned to, or target version for an new issue? This makes sense only for the developers themselves and is uninteresting (best) or confusing (worse) for the bug/feature reporters.
As it seems, even redmine has problems with this, as you put these 2 lines in "SubmittingBugs":
- please DON'T fill the target version field: let the developers decide when integrate
- please DON'T assign the feature request to anybody, let the developers deal with it

It is possible already to add custom fields, so why not making the default fields deletable?

best regards,
jakob

I am very happy to have finally found a tool that ties together the vital parts of project(s) management as well as redmine does. Great Job! I am in the process of standing up a version with many external contributors and a need to manage the content of incremental baselines. Due to the number and diversity of contributors on our project, the features of and changes to a target version must be tightly controlled by a configuration control board. This issue means that the board must extend extra effort to guard against any redirection of issues.
This is yet another duplicate of #703 + #12005

- Category set to Issues

Duplicates Feature #703: Configurable required fields per tracker/status/role added

- Status changed from New to Closed
- Resolution set to Duplicate

Implemented by #703 (Redmine 2.1.0).
Administrators can make fields read only / required in workflow page.
