

Redmine - Defect #4674

Sub-project repository commits not displayed on parent project issues

2010-01-28 08:05 - Jeffrey Jones

Status:	Closed	Start date:	2010-01-28
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	0.9.2	Affected version:	0.8.7
Resolution:	Fixed		
Description I am using a master project with many sub-projects. Many times I am making fixes and commits to the repositories in the sub-projects to help fix an issue in the master project however my commits are not displaying in the master project issues when I put something like "Issue #20 - Updated table" where the commit is in a sub-project and Issue #20 is a master project issue. I assume the issues only check repositories of the current project for performance reasons but for us it is very important that the issues display commits from repositories of sub-projects. Perhaps a configuration option? (These are Git repositories just in case.)

Revision 3357 - 2010-01-31 17:25 - Jean-Philippe Lang

Allow commits to reference issues of parent projects and subprojects (#4674).

History

#1 - 2010-01-28 08:07 - Jeffrey Jones

Sorry, meant to log this as a feature, not a defect.

#2 - 2010-01-31 17:45 - Jean-Philippe Lang

- Status changed from New to Resolved
- Target version set to 0.9.2
- Resolution set to Fixed

Fixed in [r3357](#).

It's not really a defect indeed but what you describe is a common use case so it will be merged for 0.9.2 release.

#3 - 2010-02-07 12:37 - Jean-Philippe Lang

- Status changed from Resolved to Closed

Merged in [r3380](#).

#4 - 2010-10-25 07:51 - Dominik Wild

Is it possible to reference a commit in a subproject's repository from a wiki page?
