

Redmine - Defect #4704

ActionController::AbstractRequest error

2010-02-01 02:39 - Jeffrey Jones

Status:	Closed	Start date:	2010-02-01
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	0.9.1
Resolution:	Invalid		
Description			
I am currently unable to run 0.9.1 due to the following error.			
<pre>uninitialized constant ActionController::AbstractRequest</pre>			
(Full trace attached in trace.txt)			
I have done some looking around and it appears that ActionController::AbstractRequest has been removed and replaced with ActionController::Request.			
I have checked for the former in redmine and found the following;			
<pre>ubuntu:/var/www/redmine\$ grep -r 'ActionController::AbstractRequest' * lib/redmine/utils.rb: ActionController::AbstractRequest.relative_url_root.to_s lib/redmine/utils.rb: ActionController::AbstractRequest.relative_url_root=arg vendor/plugins/open_id_authentication/lib/open_id_authentication/request.rb: ActionController::AbstractRequest.send :include, OpenIdAuthentication::Request vendor/plugins/actionwebservice/lib/action_web_service/protocol/abstract.rb: class SimpleActionPackRequest < ActionController::AbstractRequest # :nodoc: vendor/rails/railties/guides/source/2_3_release_notes.textile:* +ActionController::AbstractRequest+ and +ActionController::Request+ have been unified. The new +ActionController::Request+ inherits from +Rack::Request+. This affects access to +response.headers['type']+ in test requests. Use +response.content_type+ instead. vendor/rails/railties/lib/rails/mongrel_server/commands.rb: ActionController::AbstractRequest.relative_url_root = defaults[:prefix] vendor/lib/redmine/utils.rb: ActionController::AbstractRequest.relative_url_root.to_s vendor/lib/redmine/utils.rb: ActionController::AbstractRequest.relative_url_root=arg</pre>

History

#1 - 2010-02-01 15:31 - Johannes Koch

I got the same problem on windows

ruby 1.8.6 (2007-09-24 patchlevel 111) [i386-mswin32]

Rails 2.3.5

RubyGems 1.3.5

- LOCAL GEMS ***

actionmailer (2.2.2)

actionpack (2.2.2)

activerecord (2.2.2)

activeresource (2.2.2)

activesupport (2.2.2)

fxri (0.3.6)

fxruby (1.6.12)

hpricot (0.6)

log4r (1.0.5)

rack (1.0.1)

rails (2.2.2)

rake (0.8.7, 0.7.3)

sources (0.0.1)

win32-api (1.0.4)

win32-clipboard (0.4.3)

win32-dir (0.3.2)

win32-eventlog (0.4.6)

win32-file (0.5.4)

win32-file-stat (1.2.7)

win32-process (0.5.3)

win32-sapi (0.1.4)

win32-sound (0.4.1)

windows-api (0.2.0)

windows-pr (0.7.2)

xmpp4r (0.4)

#2 - 2010-02-01 15:45 - Johannes Koch

fixed the issue for me by removing a few plugins.

#3 - 2010-02-02 01:09 - Jeffrey Jones

Which plugins did you remove?

Were they third-party?

Were they possibly mandatory in 0.8.7 and are now optional?

Did you sacrifice any usability provided by these plugins to get the base installation working?

#4 - 2010-02-02 04:41 - Beat

I'm not sure if our bug [#4712](#) is related, and if the blind edit/fix proposal there can help you here.

Would also know what you changed to make it work, as we're not back up after the update. :-)

Please tell us, tried removing all plugins which didn't error bad, without luck yet. Thanks.

#5 - 2010-02-02 05:26 - Beat

Hi guys,

Take a look at [#4499](#)

For me, deleting old files following step 3, and then applying steps 4 and 5 from here:

<http://www.redmine.org/wiki/redmine/RedmineUpgrade>

Solved my issue [#4712](#).

Maybe you got a similar one.

Redmine by default searches only OPEN bugs, but that [#4499](#) was CLOSED so I missed it unfortunately at first search here.

Good luck to all: redmine 0.9.1 seems to rock :-)

Did you sacrifice any usability provided by these plugins to get the base installation working?

I had to remove the plugins

gloc-1.1.0
actionwebservice
install.rb
redmine_code_review

then it worked again.

I had to remove the plugins

gloc-1.1.0
actionwebservice
install.rb
redmine_code_review

then it worked again.

Thanks, some of those are also removed if you do upgrade not by overwriting files from old by new, but using Step 3 method of the Installing instructions as worked for me following step 3, and then applying steps 4 and 5 from here:

<http://www.redmine.org/wiki/redmine/RedmineUpgrade>

You should really check that link and make sure to also update the database, there are quite a few upgrades being done by step 4...

#8 - 2010-02-02 20:52 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Invalid

Jeffrey, you were not running a fresh 0.9.1.
Eg. vendor/plugins/actionwebservice has gone for a while.

#9 - 2010-02-05 09:48 - Jeffrey Jones

That will teach me to make assumptions about the installation process. Merci
