<b>Resolution:</b>			

**Description**

**Observed:**  
Direct link: <http://www.redmine.org/projects/redmine/wiki>

**Desired:**  
Actual link with **page name**: <http://www.redmine.org/wiki/redmine/Overview>

The reasoning is that the page name gives the user already an idea about the content of the page.  
So if you post the link that contains the page name, it is more useful.

To have this way always used, makes it standardized and easier to fetch the more useful link.

Thanks for your consideration.
