Another:

System Issues - common for all projects - are displayed as "<Project_where_admin_added_global_version> - <version_id>". Should be rather "Global - <version_id>" or "System - <version_id>". Patch against 0.9.2 attached.

shared versions are visible in subproject's Settings/Verions, but aren't listed in Target version field, when adding/editing ticket

This is (at least in my own case) caused by bad interaction with redmine_subtasks plugin which overwrites whole issue_form. Following 2 line patch corrects the bahviour, but leaves doubts about other problems with redmine_subtask plugin.

So it's bug in subtasking plugin?

If so, we have to disable it, because we cannot work correctly with versions...

Yes, if you use the subtask plugin / patch.

But the fix is so trivial - 2 lines. So try to grep your redmine installation "@project.versions.empty" and replace with "@project.shared_versions.open.empty" and you have both - subtasks and shared versions.

#5 - 2010-02-11 11:50 - Maxim Krušina

And this fir is for redmine trunk or for plugin code?

#6 - 2010-02-11 12:29 - Anonymous

I have it running (and the patch is against) redmine_subtask PLUGIN - from http://github.com/hron/redmine_subtasks

#7 - 2010-07-13 00:49 - Holger Just

- Status changed from Resolved to Closed

- Resolution set to Invalid

This does not apply to Redmine anymore. The subtasks plugin is obsolete with the implementation of #443 in trunk.
