

Redmine - Feature #4741

Improve Bazaar repositories error message in case to use shared repository

2010-02-04 15:38 - Joe Julian

Status:	New	Start date:	2009-02-21
Priority:	Normal	Due date:	
Assignee:	Toshi MARUYAMA	% Done:	0%

Target version:	Candidate for next major release		
Resolution:			
Description			
<p>This was originally miscategorized as Feature #2799. This is a common use case as it prevents the standard trunk/branch/tag development structure.</p> <p>A shared repository created with bzd init-repo errors when running ruby script/runner "Repository.fetch_changesets" -e production I get these messages back: bzd: ERROR: Not a branch: "[...]/project_container/.bzd/branch/". bzd: ERROR: Not a branch: "[...]/project_container/.bzd/branch/".</p> <p>If we point at a sub-tree, there's still no support for branches. There are 2 ways to identify the shared repository:</p> <ul style="list-style-type: none">- bzd info will list 'shared repository: .'- .bzd/repository exists. <p>If the path points to a shared repo, some file tree should be built. Branches can be identified by a similar combination of techniques:</p> <ul style="list-style-type: none">- bzd info will list the root repository as 'shared repository'- .bzd/branch exists. <p>Sub branches:</p> <ul style="list-style-type: none">- bzd info will list the root repository as 'shared repository' and the parent branch as 'parent branch' <p>As an example, let's examine the following repo: [...]</p> <p>In summary, if the path is a repo, scan the directory tree for directories containing .bzd/branch and run bzd info on those directories. Use that output to find out which branch is the parent and use that information to build the element tree.</p> <p>I don't know how to do this in ruby, but hopefully someone can take this analysis and put something together.</p>

scm: bazaar: add adapter method to get .bzd/branch/branch.conf path from specified path (#2799, #4741, #8030).

Revision 5891 - 2011-05-25 09:46 - Toshi MARUYAMA

scm: bazaar: add unit adapter test to get .bzt/branch/branch.conf path from specified path (#2799, #4741, #8030).

Revision 5892 - 2011-05-25 10:05 - Toshi MARUYAMA

scm: bazaar: add adapter method to get "append_revisions_only" value from .bzt/branch/branch.conf (#2799, #4741, #8030).

Revision 5893 - 2011-05-25 10:06 - Toshi MARUYAMA

scm: bazaar: add unit adapter test to get "append_revisions_only" value from test repository .bzt/branch/branch.conf (#2799, #4741, #8030).

Revision 5894 - 2011-05-25 10:51 - Toshi MARUYAMA

scm: bazaar: use explicit return value in adapter branch_conf_path() (#2799, #4741, #8030).

Revision 5895 - 2011-05-25 10:51 - Toshi MARUYAMA

scm: bazaar: check not nil in adapter append_revisions_only() (#2799, #4741, #8030).

Revision 5899 - 2011-05-25 13:33 - Toshi MARUYAMA

scm: add exception of fetching revisions error in repository model (#5357, #2799, #4741, #8030).

Revision 5932 - 2011-05-27 03:14 - Toshi MARUYAMA

scm: bazaar: update test repository (#2799, #4741, #8030).

- Shared repository with trees (format: 2a)
- clone original branch to **trunk**
- set append_revisions_only = true at trunk/.bzt/branch/branch.conf

Revision 5935 - 2011-05-27 04:51 - Toshi MARUYAMA

scm: bazaar: add unit adapter test that shared repository "append_revisions_only" is false (#2799, #4741, #8030).

adapter append_revisions_only() checks whether .bzt/branch/branch.conf exists.

Revision 5936 - 2011-05-27 04:52 - Toshi MARUYAMA

scm: bazaar: rename unit adapter test "test_append_revisions_only" to "test_append_revisions_only_true" (#2799, #4741, #8030).

Revision 5937 - 2011-05-27 04:52 - Toshi MARUYAMA

scm: bazaar: add unit adapter test that append_revisions_only is false in test shared repository branch (#2799, #4741, #8030).

#4 - 2011-06-21 16:48 - André Bachmann

Is there a way how I can get your changes into my Redmine 1.2.0? Or can I simply copy bazaar_adapter.rb and abstract_adapter.rb from redmine/trunk to my Redmine 1.2.0?
