Description

Currently there appears to be no way to create an automatic link within a wiki to a particular project. The only way this is possible is by hardcoding the URL and project name in the page. If a shortcut was added for this I would imagine it should be possible to use the following methods to link to a project:

project:ID (ie. project:12)

project:identifer (ie. [Redmine](#))

project:"Project Name" (ie. [Redmine](#))

While I am talking about this in context to wiki pages, I imagine this is something that may be useful across Redmine.

Associated revisions

Revision 3422 - 2010-02-13 11:32 - Jean-Philippe Lang

Adds projects links (#4812).

History

#1 - 2010-02-12 21:03 - Bruno Garin

[[project1:a_page]] do the job, no?

#2 - 2010-02-13 11:36 - Jean-Philippe Lang

- *Category set to Text formatting*

- *Status changed from New to Closed*

- *Target version set to 1.0.0 (RC)*

- *Resolution set to Fixed*

Added in [r3422](#). You use one of the following syntax:

```
project#<id>
```

```
project:<identifier
```

```
project:<name>
```

Bruno, what you proposed is a link to project1 wiki page which is not exactly what was requested.
